Enzymes can also be used to repair damaged teeth. They can be added to toothpaste or mouthwash to prevent and remove plaque, which is harmful to the gums and teeth. This is because enzymes can break down the bacterial plaque that causes tooth decay and gum disease. Enzymes can also be used to whiten teeth. They can be found in mouthwashes and toothpastes, which contain enzymes that can remove stains from the teeth. This is because enzymes can break down the organic materials that cause stains on the teeth. Enzymes can also be used to prevent cavities. They can be found in toothpastes and mouthwashes, which contain enzymes that can prevent the growth of bacteria that cause cavities. This is because enzymes can break down the sugars that bacteria use to produce acid. Enzymes can also be used to prevent gum disease. They can be found in mouthwashes and gum sprays, which contain enzymes that can prevent the growth of bacteria that cause gum disease. This is because enzymes can break down the organic materials that cause gum disease. Enzymes can also be used to improve the breath. They can be found in mouthwashes and gum sprays, which contain enzymes that can break down the organic materials that cause bad breath. This is because enzymes can break down the organic materials that cause bad breath. Enzymes can also be used to improve the appearance of the teeth. They can be found in toothpastes and mouthwashes, which contain enzymes that can remove stains from the teeth. This is because enzymes can break down the organic materials that cause stains on the teeth. Enzymes can also be used to improve the texture of the teeth. They can be found in mouthwashes and gum sprays, which contain enzymes that can improve the texture of the teeth. This is because enzymes can break down the organic materials that cause the teeth to be rough.
**Grahame Gardner enhances Urbania range**

Grahame Gardner have enhanced their porcelain dental materials range with the addition of 935A, a new longer lasting, mid-shade, 4-layered style of porcelain brings the same high quality design features as the rest of the Urbania range, and is available in a wide selection of bold colourways.

The Urbania Scrob range has become a firm favourite due to its aesthetic nature which was launched in the UK in the 90’s. The range has been a huge success and associated with Endodontic refine and overseen by a team of highly skilled Endodontists that don’t just attract patients, they engage them.

For more information please call 011 255 1252 or take a look at www.grahamegardner.co.uk.

Our outstanding patient-centred service really is what can be provided by implant-retained bridges. "For more information call 020 7183 8388, or visit www.noblesseblog.com

**Diplomacy saves the day with Roger-Gullidge Design**

Tactful communication and persistence with Roger-Gullidge, founder of the Roger-Gullidge Design, saved the day for Apar 5 Boyd when he was requiring to Launch Pearl Dental in Streatham.

"It wasn’t for the whole thing would have been a complete disaster," says Apar. "He was absolutely brilliant to work with, he listened to everything I said to him and helped as far as possible with any idea that I had that I wanted to implement in the practice."

When disagreements with building contractors threatened to derail the development of the practice, Roger Gullidge stepped in to mediate, quickly finding a resolution that all parties could accept.

"It helped me feel that I had regained complete control of the project, but without Roger’s intervention the building would probably have left," says Apar.

**Growth your practice with a DF Exclusive™ website**

For over a decade the DentalFocus® Web Design team have been creating beautiful bespoke practice websites that don’t just attract patients, they engage them.

Now, you can set your practice apart from the competition with your own DF Exclusive™ website.

All DF Exclusive™ websites feature:
- Modern, cutting-edge designs
- Mobile compliance (including iPhone and iPad)
- Yearly updates included for effective selling
- Personalised content specific to your practice
- Up-to-date, emerging social networking
- A unique practice blog that you can run from your practice (good for SEO)
- A full CMS software

To help you make the most out of your DF Exclusive™ website, the experienced DentalFocus team will guide you through every step of the process, working closely with you to make your practice vision in existence.

The team will also be able to guide you on the best ways in which to make the most out of your website, and will continue to offer your content to help you achieve Page One Google ranking for natural search. To learn more about how you can benefit from a bespoke DF Exclusive™ website, contact the Dental Focus team today!

**Carapex ADS™ – Chlorhexidine Treatment For All Patients**

Oral health experts Carapex have capitalised on the antimicrobial properties of Chlorhexidine (CHX) to create Carapex ADS™ (Anti Discoloration System) mouthwash.

Available in three strengths (0.2%, 0.12% and 0.05%) the CHX-based mouthwash is ideal for most patients, including those with sensitivity or who have recently undergone invasive dental treatment. Recognised as one of the most effective treatments for gingivitis, CHX successfully fights plaque and reduces inflammation, bleeding, caries and bad breath.

Unfortunately, long-term use of CHX-based products can cause staining of the teeth, a tingling sensation in the mouth and altered taste perception. However, the unique formula of Carapex ADS™ eliminates these unpleasant side effects while preserving its antimicrobial properties. The CHX mouthwash is also gentle on the mucous membranes while helping patients to achieve a clean and healthy mouth.

The Carapex ADS™ range of complementary products includes gel and SLF-free toothpaste to take full advantage of the efficacy of CHX.

For more samples or for more information please call 01400 862304, email info@carapex.co.uk or visit www.carapex.co.uk
