You can not get used to Africa
You either like it, or you don’t, but you can’t get used to it, says Erik Ahlbom

There are no margins, no backup, so when a parasite strikes and destroys the crop in an area, there is nothing to help and the result is a local famine that never reaches our media. No headlines, no UN planes dumping food, no Band Aid. Just hunger.

Not enough
Still, when everything is going well, it is not enough. Most children get enough calories in the day, but not enough protein, leading to stunted growth in children and difficulties in following classes in school, if they have one to attend. When there is some protein, say eggs or beans in a household, the parents are sometimes faced with the choice of feeding their children with it or to sell it to get cash for things like shoes or school fees. We sometimes see the effect of this in our clinics as well. Children are sometimes exhausted, unable to stand up properly after simple extractions. A sugary drink helps this very quickly, strongly indicating that food was the problem in the first place.

It would be easy to dismiss Uganda as failed and hopelessly corrupt. As always, the truth is far more complex than that. The Ugandan government, unlike many of its counterparts, is in full control of their territory. And efforts are being made, although a European, parachuted into Uganda, might not recognise them as such. One example of this is Kampiringisa, a facility for children, one hour outside Kampaala. It is called a “Social Rehabilitation Centre”, but looks very much like a prison. Children are being picked up by the police for various offences, or swept of the streets of Kampaala when it needs tidying up. Conditions are grim. The children are fed once a day, beatings and abuse is not unheard of. At the age of 18 they are sent out to fend for themselves. Hygiene is virtually non existent. Still, it is arguable to dismiss Uganda as failed and hopelessly corrupt.

Between the villages, the roadside is strewn with small farm houses, surrounded by a small patch of land where Matooke, a kind of banana, is grown. The people in them are surviving on subsistence farming, meaning that they can only just survive, as long as all goes well. Not enough

About the author

My dental career started in 1983, when I qualified as a dentist from Gothenburgh University, Sweden. I then spent the next 18 years in remote parts of northern Sweden, working where few other dentists wanted to work. In 2000 I emigrated to the UK and then went on to the Isle of Man in 2006. Last year I finally found another job that very few dentists want, and went to volunteer in Uganda.

Kampiringisa is a very well disguised blessing for some children. Free from corruption

Other efforts are being made as well. There are Ugandan dentists working with DENTAID, trying to build up a structure of dental care, free from corruption. Ambrose Matsika, Apollo Mukiza, Gilbert Rwamwitani and Sam Kiysira are unsung heroes of their country. They are skilled, dedicated and work hard for little return for themselves. DENTAID’s work would be very difficult without them.

We are on the way to Kinkizi, near the borders of Rwanda and Congo. Although the Ugandans in our team say that this is a safe area since a few years back and that the Ugandan military now have full control of the territory, I have seen enough BBC news over the past twenty years to feel a twinge of apprehension anyway.

Seeing patients

Once there, we will set up our portable dental hospital, cleverly designed by the DENTAID engineers in the UK, an operation that grows more efficient by the day. We will start seeing patients inside one hour of switching off the bus engine and keep going all day. Then we will do it again and again.

Then we’ll go home, try and get the red dust out of our clothes and try to understand what we have seen and done. I’ll go through my pictures and relive the joy and the heartache that I’ve experienced and I’ll feel a twinge of guilt over my easy life.

So, did I get used to Africa? Of course not. No one does.

But I will return.

Company info

Dentaid is an oral health charity, supporting around 260 oral health programmes in 60 countries. In recent years, the charity has expanded its work from just supplying refurbished dental surgeries for charitable projects, to playing vital roles in oral health promotion. For example establishing innovative school prevention programmes, and initiating various training schemes encompassing disciplines from equipping rural health workers to carry out basic dental care in remote communities to teaching governments on fluoride advocacy and writing national oral health strategies. Dentaid is also working hard to lobby governments, companies and health organisations to adopt more oral health friendly policies and practices. For more details visit www.dentaids.org.
