The course is designed for dentists who aspire to achieve first class diagnoses and offer the most appropriate treatment plans for their patients. It also offers an environment of continuous learning through clinical cases, hands on exercises, and small group discussions.

The course will provide the basis for developing a successful and fulfilling career in implant dentistry. In addition to the core course content, participants will have access to guest lectures from leading implant dentists.

The programme is structured to provide a comprehensive understanding of the entire implant process from diagnosis to placement and restoration.

For further information on this course, please contact the Dental Directory on 0800 975 7530 or visit www.dental-directory.co.uk.

**Decapinol®**

Decapinol® is a breakthrough in modern dental technology, achieving results that other products simply cannot. It is a preventative treatment for gum disease that is easy to use and highly effective.

Decapinol® achieves this due to its innovative anti-plaque mechanism, which includes a triple action against gingivitis:

- **Extrusion and prevention:** prevents the plaque from forming and creating a colony of bacteria.
- **Control:** helps to maintain good oral hygiene and prevents the plaque from growing.
- **Elimination:** removes existing plaque and prevents new plaque from forming.

Decapinol® can be easily integrated into your practice, with the added benefit of reducing patient anxiety and improving patient satisfaction.

For more information, visit www.decapinol.co.uk.
