The ideal introduction to occlusion

Occlusion in Everyday Practice, co-authored by B205 and presented by Dr Laurence Muxoy, provides the ideal introduction to the principles of occlusion and how they affect restorative, periodontal and orthodontic treatments. Practitioners will also be able to develop their understanding and management of headway cases. In addition, the seminar includes TMJ anatomy and function and the use of appliances. Faculty-approved, worth 7 CPD hours and costing £250 per delegate, this course is also recommended for dental technicians. Locations and dates for 2013 are as follows:

- Worcester | Friday 15 March
- Belfair | Friday 29 April
- Glasgow | Friday 16 May
- Wigan | Friday 7 July

The complementary Hands-on Occlusion Practical, limited to 12 delegates at each venue, and costing £150 per delegate, will take place the following day. The hands-on course will include:

- Panoramic registration and mounting of an upper model
- Centric relation manipulation
- Construction of an anterior jig
- Use of a Life Gauge and centric relation records to mount a lower model
- Construction of a lower stabilisation splint on the mounted models
- Delivery of the stabilisation splint up to the canine

With places awarded on a first come, first served basis, do not delay in booking your spot. For further details, please email info@healthcare-learning.com or call 0330 730 0999.

Exciting New Products from GC UK at BDA 2013

A new range of products is on offer at the British Dental Association stand. The new product line, introduced at the BDA Dental Show this year, includes in conjunction with a conventional composite such as General P200 retarder used as enamel replacement. The short films of GC everFill post will make it a perfect sub-stratum for enamel or any composite restoration in large size cavities. Films will also prevent and stop crack propagation through the filling, which is considered to be the main cause of composite failures. Thanks to its unique properties, GC everFill: Posterior opens new possibilities for restorations of extensive restorations at chairside and is the answer to the growing demand for an economical restorative alternative for big size cavities.

Advances in glass technology have resulted in the development of hand mixed GC ARTIVA R, a high strength glass ionomer cement with a new generation of filler glass FIA, resulting in a restoration with very high transparency that changes little over time. The result is a natural aesthetics never before achievable with conventional glass ionomers.

Please visit stand F02 at the BDA Exhibition for a hands-on experience with these products.

Dr Richard Kahan at the BDA

Belfast | Friday 19 April

Dr Richard Kahan at the BDA will be discussing the treatment of severe periodontal disease.

AEON II is a revolution in periodontal treatment, and delivers a new philosophy for managing periodontal disease. AEON II is the revolution in caries remineralisation technology that combines the advantages of a fissure sealant with a universal resin. AEON II is a system that has redefined the “wait and see” approach, enabling Dentists to offer an immediate treatment without unnecessary loss of healthy tooth structure. It prevents lesion progression and increases life expectancy for the tooth. Providing a highly aesthetic solution, caries lesions treated with AEON II look the same as the surrounding healthy enamel. Total treatment time is about 15 minutes.

For further information contact Rachel/Michael, DMD’s Icon and Ileanes Product Specialist, on 07844 725045 or Michael.dental@ Clark.co.uk. Alternatively contact your local dental dealer or DMD-Dental Products (UK) Ltd on 0161 7509411. See www.mcrepairs.co.uk or visit www.dmg-dental.com

Teflon® FEP Teflon® FEP Teflon® FEP – the revolutionary Teflon® FEP is a fluoropolymer composite which has been specifically developed for endodontic applications. Teflon® FEP is used in conjunction with a conventional composite such as GC’s APF, which is known for its excellent fluidity and flow properties.

Teflon® FEP’s unique properties result in a material that has no organic matrix, making it resistant to the absorption of moisture. In addition, Teflon® FEP is able to resist the attack of acids, such as citric acid, and organic solvents. These properties make Teflon® FEP extremely useful in endodontic applications.

In combination with GC’s APF, Teflon® FEP is able to provide a seal against the dentinal tubules, which are a common cause of recurrent endodontic failures. Teflon® FEP is also able to enhance the adhesion of GC’s APF to the root dentine, which is particularly important in cases where the dentine is carious.

In conclusion, Teflon® FEP is a material that has been specifically developed for endodontic applications. Its unique properties make it an ideal material for use in endodontic procedures and it is a material that has been shown to be highly effective in the treatment of recurrent endodontic failures.
