CB12– breath rescue

When patients need help with bad breath, come to the rescue with a sample CB12 Monodose pack.

With its low concentrations of zinc, urea and chlorhexidine, CB12 neutralises the VSCs which can cause bad breath. And because it works long for up to 12 hours, it can offer sufferers release from the annoyance that accompanies the troublesome condition.

Available in a handy monodose pack containing one 10ml dose, CB12 tackles the cause of bad breath, rather than just masking it. Easy to use and with a refreshing minty fresh taste as well as added fluoride, CB12 Monodose provides a simple and effective way for patients to experience the benefits of CB12 and relief from their symptoms.

Large enough for ease of handling, but small enough to be discrete and fit in the pocket, make CB12 Monodose the first line of defence against bad breath.

Come to the rescue now and order your supply of CB12 Monodose.

For more information about CB12 Monodose and how it could benefit your patients, please email info@medapharma.co.uk or visit www.cb12.com

The Dental Directory – we do more than just care...

For more information, contact The Dental Directory on 0800 585 586 or visit www.dental-directory.co.uk

Act early against gum disease

As un diag nosed and untreated periodontal disease is one of the fastest growing areas of hepatitis and compassion in dentistry, acting early against gum disease has never been so important. The Dental Defence Union (DDU) recommends use of the Basic Periodontal Examination (BPE) to help reduce the risk of a claim for failing to diagnose periodontal disease.

First produced by the British Society of Periodontology in 1986, the BPE is a simple screening tool to identify your patient’s periodontal status.

All patients should have the BPE performed and their score recorded, which will enable you to, as dental professionals, to determine how to best protect their gum health.

With over 30 years’ gum care expertise, Corsodyl® is committed to helping dental professionals to identify the signs of periodontal disease as early as possible. Corsodyl® has recently launched two free materials to help in the identification and management of gum disease, under the BPE: “Gum Health – A Practitioner’s Guide” is a handy booklet designed to reinforce your knowledge of gum health, symptoms and risk factors.

Excellence is a key competitive advantage for the UK market, and it is essential for companies to maintain high standards to meet the needs of their customers. This new initiative by the UK's leading dental manufacturer, DUX Dental, is a testament to their commitment to excellence, as it aims to provide a comprehensive solution for dental practices looking to upgrade their equipment and improve patient care. The new product range includes a range of high-quality, durable restorations, patient referrals, and advanced Hyperion X9 CBCT equipment, all designed to help dental professionals deliver the best possible care to their patients. The introduction of this new range is a significant step forward for the dental industry, and it is expected to have a positive impact on the overall quality of care provided to patients. As dental professionals seek to improve their clinical outcomes and enhance patient experience, this new technology provides them with the tools necessary to achieve their goals.
