GapSeal® - The decisive weapon against periodontitis Out of manufacturing noises, gaps and hollow spaces between implant and structures are inevitable for all compound implants. These gaps can be renewed depending on fabrication precision. However, they are never: completely bacteria-proof. Already 16 years ago, the Clinic for Oral and Maxillofacial Surgery of the Heinrich-Heine-University, Düsseldorf, Germany under the direction of Prof. Dr. Dr. f. h. Fässerbarth found to find a solution to this problem. GapSeal® (Philip & Wellen) is based on a special silicon matrix ingredient composition which prevents infiltration of bacteria. It is used directly after fitting of the implant with the first flocc of the locking screw. The implant is then doubly protected against infections by bacteria, viruses and fungi from the very beginning. GapSeal® is most easy in application as the material is offered in small portion sticks, together with a special applicator. A short video can be found at www.hagenwein.com »YouTube

Fig GapSeal® seals implant gaps and hollow spaces.

Strength in clusters Filtek Z500 universal composite is a visible light activated, direct restorative material. The material uses its strength and aesthetics to 3M ESPE’s unique composite technology. The company discovered that if nanoparticles were introduced into mixed and large clusters, those clusters wouldn’t dislocate into the matrix and the composite would be more aesthetically appealing. At the same time, the material preserves its properties such as the wear resistance of small, medium and large particles within its matrix. Filtek Z500 universal composite is suitable for both direct and indirect anterior and posterior restorations including inlays, onlays and veneers. It also features reduced stickiness and is available in eight universal shades and one opaque shade.

Find out more about the latest addition to the 2-family and call 3M ESPE today!

CB12 – breath rescue When patients need help with bad breath, come to the rescue with a sample CB12 Microsol pack.

With its low concentrations of zinc, xylitol and chlorhexidine, CB12 neutralises the VSC’s which can cause bad breath. And because it works for up to 12 hours, it can offer sustained relief from the anxiety that may accompany the troublesome condition.

Available in a handy mono-dose pack containing one 10ml dose, CB12 tackles the cause of bad breath, rather than just the symptom. Easy to use and with a refreshing menthol taste as well as added fluoride, CB12 Microsol provides a simple and effective way for patients to experience the benefits of CB12 and relief from their symptoms.

Large enough for ease of handling, but small enough to be discreet and fit in the pocket, make CB12 Microsol the front line of defence against bad breath. Come to the rescue now and order your supply of CB12 Microsol.

For more information about CB12 Microsol and how it can benefit your patients, please visit info@medapharma.co.uk or visit www.cb12.com

True versatility Scotchbond Universal from 3M ESPE is the only adhesive you’ll ever need. It achieves high and consistent bond strength in total etch and self etch modes and is also suitable for selective etch.

Easy to use, it features a flip-tap vial for one-hand operation and a unique nozzle design for dispensing control.

The product provides consistent performance on etched dentine that is left either moist or dry, bonds to all surfaces and can be used for multiple indications.

EndoCare

At EndoCare we excel at diagnosing and treating dental pain in all its forms. Our team of highly trained Endodontists are all experts in their field and absolutely committed to providing our patients with the highest standard of care. In the last 10 years, we’ve saved over a million teeth by providing patients with the knowledge and experience to extract a tooth correctly.

Our philosophy is simple: we strive to provide high quality Endodontic treatments in a warm and caring environment where patients’ needs are always our number one concern.

So if you have a difficult diagnosis, or need help with anything as simple as a cavity filling, we are always ready and willing to assist you in any way we can. We particularly excel at treating nervous or anxious patients and other challenging issues such as post-treatment, pain management, and re-treatments.

For further information please call EndoCare on 020 7224 0999.

Finding your way around a GDS contract

The team at Goodman Grant Solicitors have 75 years’ experience in dealing with the dental industry, is bringing a legal team of highly trained GDS solicitors who are all experts in their field and absolutely committed to providing their clients with the best legal advice. With a history of over 231 deals with how the composition of the contract can be changed without affecting its validity, and there are contracts that describe what must happen in the event of the death of a partner.

Without professional assistance, understanding your GDS contract can cause real confusion and uncertainty. Goodman Grant Solicitors specialise in dental contracts and are able to help explain the many intricacies of the GDS contract to ensure that appropriate decisions are made. Contact the experienced team today to ensure your contract is the right one.

For more information please call Rip Goodman on 0113 707 0000 email rip@goodmantemple.co.uk or John Grant on 0113 844700 email jmp@goodmantemple.co.uk

Snappy restorative GIC from Kemdent can save significantly on treatment times, meaning the patient can enjoy shorter dental visits whilst retaining high quality dentistry.

The concise dental range to make you smile

Grahame Gardner Direct on 0116 255 6326.

The concise dental range to make you smile

Grahame Gardner Ltd has been producing healthcare garments for over 100 years covering an extensive array of very high quality fabric and designing for Dentists

This comprises scrubs from the Smarter, Urbanale and lanea, plus stylish footwear from the Vitale range, and complimentary footwear from Toffeln.

Working with Dental surgeons for decades has given Grahame Gardner the experience they need to create this collection, choosing the perfect garments for all practice staff. With a huge range of colours available, practice managers should readily be able to pick the best combination to reflect the practice identity.

Visualisation solutions for all situations

Delegates at the BDMA Conference and Exhibition were given the opportunity to test for themselves the Carl Zeiss micro-vascular systems provided exclusively in the UK by Navue. It was particularly impressed by the incredible image quality and ergonomic sophistication on display.

With a selection of binoculars and dental microscopes ranging from the original TTL Telecope and the original OCT binoculars to the latest 3D vision through to the launch of two superior flowable materials; GC introduce the next generation of flowables

The Concise Dental Range is delighted to announce the launch of the next generation of flowables

GC, the leader in dental materials technology is pleased to announce the launch of two superior flowable materials; G-Enamel Universal Flow and G-Flow, for all restorations where fastidious aesthetics, functional and durable restorations

Both flowables materials benefit from a composition that features a unique filler technology. Unlike other flowable composites the GC materials have a higher filler load and a homogeneous dispersion of the fillers. G-Enamel Universal Flow in particular features a high viscosity, making it ideal for placement in class IV restorations. Essentially, it looks like a flowable but behaves like a restorative. Its indications are for direct restorations, minimum intervention cavities and fissure sealing.

These restoratives are dispensed through an ergonomically designed syringe that enables smooth delivery of the material, with a squared tip that means no paste can stick to it. The syringe provides a comfortable hold and the arched shape of the flask fits the hand ergonomically. The design also prevents material waste because minimal residual paste remains in the syringe after use.

For further information please contact GC UK on 0116 218 999.
