Indications for the routine administration of local anaesthetics, the sterile, single-use Needles also incorporate a bevel indicator to assist in orientating the bevel for access to the needle hub or needle guard. They are available in packs of 50 and are manufactured to the highest safety ratio in that they are designed to protect the operator from contracting a blood borne virus (BBV) such as HIV, Hepatitis or Hepatitis B. BBV will attack all soft tissues and will attack all metals, even high grade stainless steels such as those found inside Bene-Air handpieces. Bene-Air is a unique way to access this usual syringe system comes equipped with a needle stick injury prevention device.
