Lootzer® LK - Directors new mechanical protocols offer improved safety, precision and accuracy

The Swedish dental manufacturer Directa AB sets a new standard foratraumatic extraction instruments with the new dual-tipped surgical gun lootzer® LK.

Lootzer LK enables optimal access and safer extractions with minimal tissue damage, used in combination with instruments (Pair: Dual Edge, Fore and RootPick), Lootzer LK is strongly advised for hard to reach areas, especially molars and separated roots to preserve the tuber and minimize the risk of the lingual and buccal flap. The innovative movement in vertical direction secures cutting of the fibres in a pain friendly way, so self directing tips follow the most natural, reducing the risk of bone damage.

The durable titanium coating are tips are available in two sizes, short and Long. The titanium coating allows them to glide easier into the socket and remain sharp.

Exciting News, the Lisa autodrive from W&H now comes with a basic effective fast cycle

Within the Lisa 570 sterilizers, W&H now offers the option for an even shorter - yet very solid - sterilization cycle of unpacked instruments, in addition to the proven Class B cycles and the proven Class C function, which minimizes the possibility of damage due to long periods of exposure to high temperatures. To improve efficiency, the Lisa requires no cooling down period between cycles. The new ‘Fast 134 Cycle’, offers the option of an even faster more economical sterilization cycle at six extra cost. This Lisa has now been updated to include the fast new ‘Fast 134 Cycle’ which allows you to sterilize unpacked handpieces as well as solid instruments in just 14 minutes. In order to better support our customers, W&H Premium Care and Premium Camplux Service Plan for W&H decontamination products have been developed to enhance your decontamination facility in line with current guidelines, ensuring peace of mind and that your sterilizers are working at peak performance. W&H’s 24 hour online support offers added information and decontamination guidance at www.wdh-support.com. For further details regarding the full range of W&H products and services, please contact W&H (UK) ltd office@w&h.co.uk or 01392 7124992.

Oval 8® toothbrushes lead a new wave of research, with over 225 studies and 140 clinicals supporting both the products efficacy and safety.

Indeed, the most recent clinical research published in the American Journal of Dentistry, has reinforced the value of the Oval 8® tooth brushing relating electric toothbrushes. When compared to Sonicare Diamond Clean™, the Oval 8® “Thump” (4x more stroke) measured as the number of tooth brushing blinding sites by more than 34% and there was also a 33% greater reduction in ginv line plaque compared to Diamond Clean.

Following the clinical, researchers conducted a patient perception assessment and asked patients to rate the two tooth brushes. The Oval 8® Thump had a greater rating than the Sonicare Diamond Clean, as much so that those who did prefer it expressed a greater willingness to buy.

While both brushes are obviously safe to use, it is significant that there are discernible differences between the two products. Practitioners can be confident that when recommending the Oval 8® Thump that they’re recommending a product that really does provide optimum performance in plaque and gingival reduction, so the brushing efforts of patients can be rewarded with improved oral health.

Keeping up with the industry- Dr Richard Kahan at the CIC 2013

Dr Richard Kahan will be at the CIC 2013, Thursday 17th and 18th May at the Millennium Gloucester Hotel, Kensington.

Designed specifically to help dental practitioners keep up-to-date with their dental skills, Healthcare Learning: Smile-on is proud to host the 10th Clinical Innovations Conference in 2013, in collaboration with the AGD and The Dental Directory.

Amongst the confirmed line-up of highly respected speakers will be endodontic specialist, Dr Richard Kahan. Richard is one of very few endodontists in the UK who have been trained in both the United States and the United Kingdom.

I found the event to be very well-organised while providing a wide range of information, in all fields of dentistry. The high calibre of the presenters is outstanding and participation is free. The cost of CB12 has two active ingredients which combine to eliminate the micro organisms (growing cells) of Gram positive organisms, Aspergillus niger, Candida albicans. Staphylococcus Aureus, Clostridium Difficile (C-Diff ) vegetable cell formation and to prevent the spread of bacteria. CB12 is also beneficial for patients with gum disease, thorough plaque control is the key to successful and pain free dental treatment.

Delivering effective and instant protection from a single 10ml dose, CB12 is a clinically proven breakthrough in the elimination and management of bad breath.

For more information visit www.cb12.com or contact your local QED Salesperson.

EndoCare - best service, guaranteed
