A tropical paradise was the setting for the 89th Annual Meeting of the American Association of Oral and Maxillofacial Surgeons in mid-October in Honolulu, Hawaii.

Snake venom for oral surgery?

A new study finds an adhesive made from an enzyme found in snake venom is effective and beneficial for closing surgical incisions.

Don’t lose your ‘A’s’

The real secret of implant practice success is top referrers, also known as “A” referrers. Here are tips for hanging onto yours.

Aloha, AAOMS!

Honolulu hosts 89th AAOMS meeting

By Sierra Rendon, Managing Editor, Implant Tribune

More than 4,700 registrants with 52 countries represented put this year’s event in the top 10 of annual meetings in AAOMS history and was held in conjunction with the Japanese Society of Oral and Maxillofacial Surgeons and the Korean Association of Oral and Maxillofacial Surgeons.

Implants placed in combination with internal sinus lift without graft material

By P. Rammelsberg, O. Gabbert and A. Koob
Department of Prosthodontics, University of Heidelberg, Germany

Objectives: Numerous techniques for external and internal sinus lifts are combined with different types of bone grafts. Objective of this prospective clinical study was to investigate the short-term outcome of implants placed with simultaneous internal sinus lifts without graft materials.
