Study with Weigl on your lunch hour

Learn about implant aesthetics with Dr. Paul Weigl during your lunch hour!

At noon (EST) Dec. 9, Weigl will offer a one-hour webinar, “Brilliant Implant Aesthetics — Innovative Soft-Tissue Shaping Or Prosthetic Socket Preservation,” followed by a live question-and-answer session with the online audience.

A great challenge in implantology today is a predictable, long-lasting red esthetic result.

An innovative treatment concept is based on a non-traumatic and effective shaping of the periimplant soft tissue — including an anatomical shaping from the first second. Learn how to achieve results, which are promising and more predictable than the commonly used “surgical” socket preservation.

Weigl graduated from the University of Munich Dental School in 1989. Since 1992, he has worked as an assistant professor and director of preclinical studies for the Department of Prosthodontics of the Johann Wolfgang Goethe-University Frankfurt am Main.

Weigl has a special focus in the field of prosthetics on implants. He is also a senior specialist at the Department of Oral Surgery and Implant Dentistry, University of Frankfurt.

Additionally, he runs a research-and-development project to develop a fully automatic, working CAD/CAM process to manufacture complete crowns and bridges and to develop a new femtosecond laser-based device for diagnosis and minimally invasive therapy of caries.

This webinar provides one ADA CERP C.E. credit. The fee is $95 and attendees can register at www.DTstudyclub.com under Online Courses.
