PhotoMed can meet all your dental photography needs.

**PhotoMed gives you options**

Configure your Canon camera with the flash that is right for you

The macro flash that you use for dental photography has a huge impact on the quality of your images. Not all macro flashes are up to the task and many that are being offered are not compatible with the cameras they are being sold with.

When it comes to outfitting a Canon digital camera with a macro flash, the best choices come from Canon, Metz and Sigma. Real flashes from real flash manufacturers – not “Frankenflashes” that look like they were assembled in someone’s garage.

When you call the experts at PhotoMed, they can help guide you to the right flash for your system. Need a complete camera that includes unlimited support? We can help with that too.

Call us and find out why we’re known for the best camera equipment and the best support available.
