Laser polishing accelerates surface finish of implants, researchers say

By Dental Tribune International

AACHEN, Germany — Researchers have developed a flexible and cost-effective apparatus to polish implants automatically. The project team has managed to reduce the time needed to process dental and blood-carrying implants while maintaining their high bio- and haemocompatibility.

The surface quality of an implant plays a significant role if it is to be used in the body successfully. For example, bone implants require a porous structure so that cells can grow into them well. Other implants, however, need as smooth a surface as possible to prevent bacteria from attaching to them and the surrounding tissue from being damaged.

The MedIdsurf project has made these kinds of implants the object of its research. The seven partners of the project, funded by the German Federal Ministry of Economics and Technology and led by the Fraunhofer Institute for Laser Technology ILT, recently presented their research results in Aachen.

The main focus was the optimization of the surface of the titanium ventricular assist system INCOR, made by Berlin Heart. The project aimed at reducing production time while guaranteeing high haemocompatibility. This means that the implant should leave blood corpuscles undamaged, and corpuscles should be prevented from settling on the implant as far as possible. Blood clots are prevented from forming, thus significantly reducing the risk of heart attacks and strokes.

Initially, the researchers had to establish whether laser-based polishing of the surface could obtain the same level of haemocompatibility as with conventional methods. Laser polishing accelerates surface finish of implants, researchers say. (See LASER, page 8)

PhotoMed gives you options

Configure your Canon camera with the flash that is right for you

The macro flash that you use for dental photography has a huge impact on the quality of your images. Not all macro flashes are up to the task and many that are being offered are not compatible with the cameras they are being sold with.

When it comes to outfitting a Canon digital camera with a macro flash, the best choices come from Canon, Metz and Sigma. Real flashes from real flash manufacturers - not “frankenflashes” that look like they were assembled in someone’s garage.

When you call the experts at PhotoMed, they can help guide you to the right flash for your system. Need a complete camera that includes unlimited support? We can help with that too.

Call us and find out why we’re known for the best equipment and best support available.

current clinical interests focus on the development of cell-based tissue engineering for clinical bone formation and the immediate loading of dental implants. Other opening symposium topics and speakers are:

- “Practical and Predictable Surgical Approaches in the Esthetic Zone: Multiple Challenges,” by Daniel Buser, DDS, DMD, of Bern, Switzerland. Buser will present surgical approaches in the esthetic zone developed at the University of Bern, which offer successful outcomes with high predictability.
- “The Dental Implant: What Are the ‘Right’ Implants for Today’s Indications? Surfaces, Connections, and Flexibility,” by Clark M. Stanford, DDS, PhD, of Iowa City, Iowa. His presentation will show how the predictability of the process of tooth replacement with dental implants is becoming enhanced through the applications of new technologies expanding on our long-established protocols for implant therapy.
- “Implant Dentistry: The Interdisciplinary Advantage,” by Richard D. Roblee, DDS, MS, orthodontist from Fayetteville, Ark., Edward P. Allen, DDS, PhD, prosthodontist from Dallas, and Robert R. Winter, DDS, prosthodontist from Scottsdale, Ariz. Their presentation will focus on utilizing an interdisciplinary approach to maximize comprehensive results in implant dentistry.

The program retains many very popular features, beginning with the Corporate Forums Thursday morning. This year’s participants are BioHorizons, Biomet 3i, Dentsply Implants, Geistlich Biomaterials, Hiossen, Millennium Dental Technologies, MIS, Nobel Biocare, Osteogenics, Osteohealth, Straumann USA and Zimmer Dental. Poster presentations will be introduced Thursday afternoon, just before the welcome reception held in the exhibit area. The popular, intimate round-table clinics and limited-attendance lectures with leading experts will be Friday morning. Oral abstract research presentations will be also be presented Friday morning, and clinical innovations and poster sessions will be Friday afternoon, preceding the president’s reception to be held at the Florida Aquarium.

The Allied Staff Program and the Laboratory Technician Program will be held Saturday. The popular “Lunch & Learn Sessions” return Saturday at noon.

Saturday’s Closing Symposium addresses the topic, “Where Are We Today and What Does the Future Hold?” Speakers will address esthetic parameters of tooth replacement, the role of team in implant dentistry, peri-implant tissue management and the evolving role of radiology in improving predictability.

More speakers and topics include:

- Urs C. Belser, DMD, of the University of Geneva, Geneva, Switzerland, “Contemporary Implant-Assisted Options for Patients with High Esthetic Demands: Where Are We Today and Where Will We Be Tomorrow?” Belser will discuss the rationale for an early placement/early loading concept for replacement of extracted teeth.
- David A. Garber, DMD, Henry Salama, DMD, and Maurice A. Salama, DMD, of Atlanta, on “What Was, What Is and What Will Be The Evolving Role of Team in Implant Dentistry.” Their discussion will focus on a defined algorithm for the inter-disciplinary team and will cover the diagnosis of deficiencies and the varied treatment options in detail.
- Joseph Y.K. Kan, DDS, MS, of Loma Linda, Calif., on “Peri-Implant Tissues in the Esthetic Zone: What Do We Really Know and What Can We Realistically Achieve?” Focusing on current implant treatment philosophies and methodologies, Kan will cover diagnosis and treatment planning, surgical, prosthetic management and the evolving role of radiology in improving predictability.
- William C. Scarfe, DDS, BDS, MS, of Louisville, Ky., on “The Evolving Role of Radiology in Improving Treatment Predictability in Implant Therapy.” Scarfe’s presentation will provide a closer look at how CBCT imaging will provide the 3-D framework for implant therapy totally within the digital domain, thereby improving treatment predictability.

Friday morning’s program features the highly successful parallel surgical and restorative tracks, annual meeting organizers said. Speakers will include Drs. Craig Misch, Sarasota, Fla.; Robert Marx, Miami; Paul Fugazzotto, Milton, Mass.; Eduardo Lorenzana, San Antonio, Texas; Dennis Sheline, Santa Barbara, Calif.; Hideaki Katsuyama, Yokohama, Japan; Thomas Wilson, Dallas; Brody Hildebrand, Dallas; Ronald Jung, Zurich, Switzerland; Hans-Peter Weber, Boston; Stephen Parel, Dallas; German Gallucci, Boston; Mario Roccuzzo, Torino, Italy; and J. Robert Kelly, Farmington, Conn.

The program was created by the 2013 Annual Meeting Committee, chaired by Dr. Dean Morton, Louisville, Ky.
BE AMAZED BY WATERLASE®

SEE FIRST-DAY OWNERS & THEIR PATIENTS EXPERIENCE THE NEW WATERLASE IPLUS

The new WaterLase is simply amazing – but don’t take our word for it. Visit AMAZEDBYWATERLASE.COM to see new owners and their first WaterLase patients experience the technology on day one, or see for yourself by scheduling a demo in your practice today.

- Generate word-of-mouth referrals with WaterLase procedures that amaze your patients
- Be part of the social media buzz driving new patients to WaterLase dentists
- Work more efficiently – less local anesthetic, no packing cord, reduce chairtime
- More than 50 hours of live, hands-on training available with your system
- Total versatility compared to other laser systems

CALL TODAY TO DEMO WATERLASE IN YOUR PRACTICE

²Biologic implant addition.
From the moment a new patient walks into the practice, members of the dental office staff play an indispensable role in learning about the past dental histories of patients and what kind of smile that person would like to have. They have an opportunity to educate patients about options for treating missing or hopeless teeth and/or replacing ill-fitting removable prostheses.

The patient experience starts with the receptionist (the face of the practice at this point), who can make patients comfortable with the knowledge that they are in the right place and will be taken care of. Receptionists must have the skill sets to graciously pass the patients off to the assistants and/or implant treatment coordinator. This transfer must be done professionally and with great care, such that patients continue to feel that they are in the right place.

Assistants generally walk the patient through the exam process and should educate the patients as to what they can expect: medical and dental histories, digital radiographs, complete physical examination, assessment, diagnosis and treatment plan options.

Treatment coordinators, depending on the particular practice, will then be called upon to explain the diagnoses and describe the benefits and limitations of the treatment plan options. Dental hygienists, who develop trust and rapport with their patients over time, can further support this process by educating them about the options that are now available.

An extraordinary opportunity for staff members to enhance their skills will unfold Saturday, March 9, at the dedicated Allied Staff Education Program that is a part of this year’s 28th AO Annual Meeting in Tampa, Fla. The program is intended for implant treatment coordinators, dental hygienists, assistants and business office staff/receptionists.

The day will start with Dr. Carl Drago’s overview of comprehensive care needs of “dentally exhausted” patients. Although many dental practitioners have spent their careers “saving” debilitated teeth, when ongoing expensive and time-consuming dental care continues to yield less than optimal results, patients may fare better by having their compromised teeth extracted, followed by immediate placement of implants and full-arch restorations. This approach represents a significant paradigm shift from “traditional” dentistry. Drago, of Waukesha, Wis., will discuss how office and clinical staff can interact with and support patients in their decisions regarding full-arch implant-supported restorations.

A significant number of patients do not warrant full-arch treatment and have one or two problem teeth or areas. Accelerated treatment protocols have been well researched and clinically proven. However, not every patient is a candidate for immediate implant placement and provisional restoration in the esthetic zone. Dr. Joseph R. Carpentieri of White Plains, N.Y., will discuss the delicate balance that must be struck between using accelerated implant-placement protocols and achieving predictable aesthetic outcomes. In particular, he will focus on criteria for distinguishing which patients are good candidates for implant placement and provisional restoration immediately after extraction of anterior maxillary teeth.

After an audience-participatory discussion and a break for lunch, Dr. Robert N. Eskow of Livingston, N.J., will continue the focus on the role played by staff members in identifying potential candidates for elective implant therapy. He also will explain some of the pre-treatment therapeutic measures that can be administered to enhance the likelihood of achieving optimal results.

Before, during and after implant treatment, effective preventive care is essential to sustaining esthetic restorations, teeth and implants over time. Registered Dental Hygienist Valerie Sternberg-Smith of Summit, N.J., will be discussing the causes of peri-implantitis and how to recognize the early signs. She also will explain how to determine the best plaque-control aids for various esthetic restorative/prosthetic designs.

About the author
Anita H. Daniels of Jupiter, Fla., chairs the AO’s Allied Professional Staff Education Subcommittee. She is a registered dental hygienist.
DENTSPLY Implants is the union of two successful and innovative dental implant businesses: DENTSPLY Friadent and Astra Tech Dental.

DENTSPLY Implants offers a comprehensive line of implants, including ANKYLOS®, Astra Tech Implant System™ and XIVE®, digital technologies such as ATLANTISTM patient-specific abutments, regenerative bone products and professional development programs.

We are dedicated to continuing the tradition of DENTSPLY International, the world leader in dentistry with 110 years of industry experience, by providing high quality and groundbreaking oral healthcare solutions that create value for dental professionals, and allows for predictable and lasting implant treatment outcomes, resulting in enhanced quality of life for patients.

We invite you to join us on our journey to redefine implant dentistry. For more information, visit www.dentsplyimplants.com.

AACD lineup revealed

Garber, Salama among the list of speakers at upcoming meeting

Courses and educators for AACD 2013 have now been revealed, including Drs. David Garber, Maurice Salama and many others among the lineup.

AACD 2013, the American Academy of Cosmetic Dentistry’s (AACD) annual scientific session, is slated for April 24-27 in Seattle. Attendees who register before April 5 will receive $150 off their tuition. To register, visit www.aacdconference.com.

What sets the AACD’s meeting apart from other dental meetings is the live learning experience, AACD President Ron Goodlin said.

“Our courses are geared toward all members of the dental team — from dentists to lab techs, hygienists, team members, office staff and more,” Goodlin said. “AACD 2013 is a place where dentists and teams can evolve together. They’ll return to their practices the following Monday with a new set of skills, new techniques and new energy.”

To see who’s on this year’s lineup, check out the AACD’s digital version of the preliminary conference guide, available at bluetoad.com/publication/?i=85943. The digital conference guide lists courses, speaker bios, exhibitor lists, schedules of events and information about social events, including receptions and fund-raising activities for the AACD Charitable Foundation.

The conference kicks off at 2:30 p.m. April 24 with a “power session” featuring Drs. Garber and Salama. Following the power session is the AACD’s welcome reception, which will be held at the Experience Music Project, located at the base of Seattle’s famous Space Needle.

Attendees are encouraged to register for the conference as soon as possible and to view the courses in the preliminary guide prior to course selection opening. For more information or to register, visit www.aacdconference.com.

Trade show is March 7–9 in the heart of Canada’s top tourist attractions

Experience the true flavor of the West Coast and earn C.E. credits at the same time.

The Pacific Dental Conference has an expert lineup of local, North American and international speakers. With more than 350 presenters, 150 open sessions and 36 hands-on courses covering a variety of topics, there is something for every member of your dental team.

Explore the largest two-day dental trade show in Canada (www.pdcconf.com) and have the year’s first opportunity to see the newest equipment.

Organizers invite attendees into the exhibit hall to see innovative new techniques demonstrated on the live dentistry stage while also examining products and services from more than 300 exhibiting companies.

Representatives from every company will be ready to engage attendees in discussions on creating practice solutions.

After the conference, you can take a day to relax and revitalize by exploring some of the great tourist attractions in Vancouver. The ocean is steps from the Vancouver Convention Centre, and pristine snow-capped mountains offer choice spring-like skiing conditions.

Alongside this polishing process, a prototype apparatus has been developed at the Fraunhofer ILT for automated laser polishing of implants. For the first time, scientists have developed a glove box with a six-axis articulated robot, which can grasp the implants and process a complete series of them on its own. This automated machine engineering makes the entire process less expensive, more flexible and appropriate for industrial series production.
