Atlantis offers patient-specific abutments for all of the major implant systems

Regardless of the implant system(s) you use in your practice, whether it is Astra Tech, Nobel BioCare, Straumann, Implant Innovations or Zimmer Dental, just to name a few, Atlantis™ is a leading cement-retained solution for implant restorations. Available in titanium, gold-shaded titanium and four shades of zirconia for true flexibility, and backed by more than 10 years of clinical use and the most comprehensive warranty on the market, Atlantis continues to set the standard in the area of CAD/CAM implant dentistry, the company asserts.

Incorporating Atlantis into your implant practice brings simplicity and flexibility, eliminates the need for inventory management of stock components and requires no investment in hardware or software.

Features include:
- The anatomically optimal emergence profile of the abutment supports outstanding function and esthetics — as close to natural prepped teeth as you can get.
- Simple restorative procedure with reduced chair time — just take an implant-level impression and send the impressions to your dental laboratory.
- Margins can be designed at an ideal level for safe and easy cement removal.

The latest Atlantis Abutment interface options include Astra Tech OsseoSpeed™ TX Profile and Keystone PrimatConnex™.
