On 11 May, 2012, Astra Tech presented new clinical data which confirmed the clinical effectiveness of its dental implant system at the Astra Tech World Congress. The results gathered through the company’s global research programme demonstrate high survival rates for the company’s OsseoSpeed implants in sites like the posterior mandible.

“We are very proud to present continuous positive data from our global clinical research program at the Astra Tech World Congress. For us it is of utmost importance that clinicians feel confident when using our implant system to care for their patients. Ninety percent of all dental implant systems available today have no clinical documentation” says Anna Karin Lundgren, Head of Global Scientific Management.

Recent multicentre studies have also demonstrated the safety and predictability of OsseoSpeed 3 mm narrow implants and OsseoSpeed Profile implants, company officials said at the Astra Tech World Congress in Gothenburg.

Astra Tech’s third and largest world congress, which was held from Wednesday, 9 March, 2012 to Saturday 12 March, 2012, has drawn international researchers and experts from the field of dental implantology to the company’s headquarters in Sweden. With hundreds of
