The CanalPro™ Ultrasonic Irrigator (Photo/Coltene/Whaledent)

Attached to a piezo unit, the CanalPro™ Ultrasonic Irrigator allows for distribution of activated sodium hypochlorite to increase debridement of lateral canals and isthmuses.

The autoclavable, nickel titanium tip provides excellent access to the canal, while the ratcheting syringe permits controlled delivery of 0.2 ml of solution with each audible click. The CanalPro Ultrasonic Irrigator fits all major ultrasonic units.

COLTENE® ENDO brands represent more than a century of experience in providing essential and reliable endodontic products and materials that are clinically proven to ensure successful endodontic therapy.

For more information about the new CanalPro Ultrasonic Irrigator and the many other products available from COLTENE ENDO, contact Coltène/Whaledent at (330) 916-8800 or visit coltene.com.
