Vista Dental Products is revolutionizing composite delivery with its new line of Therma-Flo™ products, which the company says are uniquely engineered to utilize heat for optimal performance of any preferred composite material.

The Therma-Flo Composite Warming Kit is designed to improve the flowability of highly filled composites more than 100 percent through the use of heat. With the Therma-Flo Warming Kit, your preferred highly filled composite will perform like a flowable, providing greater adaptation to the cavity walls, according to Vista.

Scientific research indicates heating composite material aids in the reduction of curing time and improves polymerization, which reduces voids in the restoration, the company says. Heated composite material is much easier to manipulate, making placement fast and effortless.

The Therma-Flo Warming Kit accepts most manufacturers’ composite capsules and composite guns, so dentists can continue to use the composite of their choice. The kit also includes Vista’s new Therma-Flo Step Down tips, ideal for precision placement of composite material.

For more information on this and a wide range of other products, contact Vista Dental Products at (877) 418-4782, or visit the company online, at www.vista-dental.com.
