Planmeca makes CAD/CAM easier than ever

State-of-the-art solutions for dentists

Planmeca’s open-interface-based CAD/CAM solutions introduce, above all, quality, cost-efficiency and precision to the daily workflow at dental clinics or laboratories. Petri Kajander, Product Manager for Planmeca’s CAD/CAM solutions, explains the revolutionary features of these new products.

**PLANMECA PLANSCAN—SUPER FAST INTRAORAL SCANNER**

The new Planmeca PlanScan is a digital and powder-free intraoral scanner that scans the patient’s dentition quickly and accurately. The scanner produces real-time digital impressions from one-tooth to full-arch scans. Thanks to the open STL data, the scanned files can be sent to any dental laboratory for design work. This is the world’s first dental unit-integrated intraoral scanner that can also be connected to a laptop.

“The scanner has only one cable, so it is extremely easy to move from one place to another, for example between different treatment rooms or clinics,” says Product Manager Petri Kajander. In addition, the scanner is delivered with a laptop, so the device can be flexibly shared between different users. In other words, Planmeca PlanScan offers value for your investment: it is not a device for just one dentist but can be used by the entire clinic.”

The scanner utilises blue laser technique. It projects a pattern on the surface of the teeth and then analyses the reflected and integrated intraoral scanner that can also be connected to a laptop. This creates a design that allows the work to be set immediately to a partner via the Planmeca Romexis Cloud service.

Since Planmeca PlanCAD Easy is integrated in Planmeca Romexis software, soft tissue scans can also be conveniently paired with the patient’s CBCT image. This combined data provides valuable information for implant planning, for example, because in addition to the soft tissues, it visualises the crown that is designed for the occlusion. This facilitates the planning of the implant screw’s location.

**PLANMECA PLANCAD EASY—EFFICIENT DESIGN TOOL FOR PROSTHETICS**

Planmeca also offers dentists a new kind of open software solution for 3D design. Planmeca PlanCAD Easy is seamlessly integrated in Planmeca Romexis software and it is a user-friendly design tool for the design of inlays, onlays, veneers, crowns and bridges.

“The software runs on the so-called floating licence basis. This means that it is not tied to just one computer or workstation, but the work is saved on the Planmeca Romexis server. In this way, the scanning station can be used only for scanning, while another workstation is used for the actual design work. This is a truly unique feature, which allows work to be continued straight away on another computer, while the scanner is freed for more productive operations,” says Kajander.

Every dentist designing his or her own prosthetic works will also face cases that require assistance from a dental laboratory. For this reason, Planmeca’s system utilises an open STL file format that allows the work to be sent immediately to a partner via the Planmeca Romexis Cloud service.

Since Planmeca PlanCAD Easy is integrated in Planmeca Romexis software, soft tissue scans can also be conveniently paired with the patient’s CBCT image. This combined data provides valuable information for implant planning, for example, because in addition to the soft tissues, it visualises the crown that is designed for the occlusion. This facilitates the planning of the implant screw’s location.

The Planmeca PlanCAD Easy workflow from preparation to the finished result includes just five easy stages: work description, scanning, marking and sending the work to the mill. “Once the work has been sent to the mill, it is transferred there in its entirety and the mill’s computer finishes the work. In this way, the software and scanner are immediately freed for a new assignment.”

The software is very user-friendly. All design phases are saved automatically, and if further improvements are needed, previous phases can be reverted to flexibly. The automatic design software automatically takes into account the adjacent teeth’s cusps and marginal ridge in addition to the contact strengths defined by the user. This creates a design that always fits its surroundings.

**PLANMECA PLANMILL 40—FAST AND PRECISE MILLING UNIT FOR DENTAL CLINICS**

Planmeca PlanMill 40 is an extremely precise four-axis milling unit operating under the control of its own computer. The device is suitable for all the indications of a single tooth, in other words for the milling of crowns, inlays, onlays and veneers. The mill can manage bridges of up to five units to the posterior and three units to the anterior area.

Since the mill handles the milled pieces completely independently, as many as several dozen pieces can be sent to the mill at a time. In addition, the device tells which block size, colour and material should be used, so any member of the staff can place the block in the mill. “This saves everyone’s working time. The dentist does not need add the block himself, but anyone can do it,” says Kajander.

The mill has a six-tool exchange mechanism, and it changes tools independently according to different job requirements. In addition, the device mills different materials according to their properties. For example, it

VITA presents extension of its DISC product line

With discs now also available in zirconium dioxide, German company VITA Zahnfabrik aims to meet current user requirements for the fabrication of high-quality restorations for patient-specific aesthetics. Launched already in March 2013, VITA In-Ceram YZ DISC Color and VITA YZ DISC HT are extensions to VITA’s DISC product line for the partially yttrium-stabilised zirconium dioxide material VITA In-Ceram YZ and are CAD/CAM processed. Both products are available in the usual sizes (a diameter of 98 mm and a height of 14 mm or 18 mm).

According to the manufacturer, VITA In-Ceram YZ DISC Color comes pre-coloured in monochromatic shades: light, medium and intense. In addition, colouring with VITA In-Ceram YZ COLORING LIQUID can be carried in order to achieve even subtler shade variations. Based on industrial standards, this controlled colouring process is claimed to provide shades of uniform quality, thereby avoiding time-consuming and error-prone manual colouring.

A high-translucency material variation was also added to the proven VITA In-Ceram YZ DISC for the efficient fabrication of monolithic, fully anatomical zirconium dioxide restorations. Owing to the high translucency of the new VITA YZ DISC HT, veneering is not required, providing a relatively inexpensive yet attractive alternative to non-veneered or partially veneered metal restorations. According to VITA, the HT DISC is also suitable for use as a substructure material in restorations intended to exhibit natural translucency.

Acteon puts Art into infection control

Infection control in dental practice is more important than ever. The RISKONTROL Art air and water syringe tips from Pierre Roland, a company of the Acteon Group, are intended not only to protect practitioners and their patients from cross-contamination, but also to eliminate the risk of microbial migration into the dental unit’s air and water lines.

According to the French manufacturer, the new tips can be used on all types of syringes. They are practical, as well as quick to fit and remove owing to their improved flexibility. Dentists can save a considerable amount of time using these tips, since they no longer have to clean, decontaminate and sterilise the original tip of their air and water syringe, the company said.

In order to create the right atmosphere in different practices, RISKONTROL Art tips are available in four new colours, representing licorice, aniseed, mandarin and blackcurrant flavours.

In theory, narrow diameter implants—usually defined as anything under 3.5 mm—make it possible to treat almost all cases involving narrow interdental spaces, especially in situations where there is only minimum amount of hard tissue. However, they have to be strong enough to survive demanding biomechanical loading and torsion, despite their small dimensions.

With its NobelActive implant, the Swiss manufacturer Nobel Biocare has a 3.0 mm implant in its portfolio, that was specifically designed for the replacement of single-unit maxillary lateral incisors as well as mandibular lateral and central incisors. These very visible single-tooth sites require highly aesthetic restorative solutions that, according to the company, can be reliably delivered with the NobelActive 3.0 implant for the long-term. Since there is not much bone to work with in areas like the ones recommended for this implant, maximum bone preservation has been a key priority in engineering aspects of the new design, the company said. Therefore, the apex of NobelActive 3.0 was equipped with integral drilling blades, that allow for a smaller initial osteotomy.

In addition to the drilling blades on the tip of the implant, reverse cutting flutes allow clinicians, who are experienced with NobelActive implants, to adjust the implant position to achieve optimal restorative orientation. This Nobel Biocare said is particularly useful in the extraction sites that are common in single-tooth anterior restorations.

Owing to its expanding tapered implant body, with double-helix thread design, NobelActive 3.0 compresses bone gradually, which is minimising trauma and providing high initial stability even in compromised bone situations. Built-in platform shifting is also part of the design to ensure maximum soft tissue volume for natural-looking aesthetics. An internal conical connection with hexagonal interlocking is supposed to provide a tight seal and secure positioning of the abutment, a must-have characteristic for any first-class, bone-anchored, single-tooth restoration.

Three-year data from an ongoing five-year study with NobelActive 3.0 demonstrate continuous positive trends consistent with the first two years’ results. In short, bone remodelling occurred during the first three months of the study, followed by increasing or stable bone levels, Nobel Biocare reported. Soft tissue variables have been stable throughout the study and the survival rate very high.

Dr Scott MacLean from Halifax in Canada finds NobelActive 3.0 to be the perfect complement to the larger diameter NobelActive implants that he has been using for years. “It is a great implant to use in tight, aesthetically demanding areas of the arch. Like the others in the Nobel Active family, it provides excellent results due to its principles of design.”

“The platform shift with conical connection maintains a solid, tight connection that is easy to restore. The thread dimensions and design make it the perfect implant for placement in upper lateral and lower incisors, somewhere between familiar to place and restore,” he added.

For Dr Philippe Russe from Reims in France, NobelActive 3.0 has also become the implant of choice for excellent aesthetics in challenging single-tooth anterior situations. “The extra bony volume around the implant supports longer papillae, improving the aesthetic outcome of usually difficult cases. With its well-known excellent initial stability, platform shifting and conical connection, the new NobelActive 3.0 has everything you need in a small diameter implant specially designed for narrow anterior spaces”, he said.

NobelActive 3.0 is widely available through the company’s sales channels around the world.

For almost a century, SHOFU Dental (Booth C78–81) has been an international household name for dental clinical and lab products. However, the company has also been manufacturing and selling equipment for digital dentistry and photography, but only in its home-market in Japan. With the introduction of the new EyeSpecial C-II, SHOFU brought a new digital camera to FDI 2014 in Greater Noida, exclusively developed for use in dentistry.

Made completely in-house in cooperation with experts in photography and cosmetic dentistry, the camera was conceptualized to be useful for a wide range of dental applica-

tions including intraoral photography, shade selection and detailed image taking of anterior teeth. It comes with eight pre-set dental modes, which according to SHOFU Dental’s Asia-Pacific Managing Director Patrick Loke, are combined with a built-in proprietary flash system and a number of image processing functions like colour-correction and auto-cropping to simplify the process of dental photography significantly. He added that the camera is extremely lightweight and features a large LCD touchscreen display, making it possible for the user to operate it with one hand, leaving the other hand free for holding the mirror or cheek retractor. Another unique feature of the camera is that it enables photos to be transferred immediately from camera to PC, Smartphone, iPad, etc.

This camera is so simple and predictable that it provides a fool-proof solution for dentists, enabling even those without any in-depth knowledge of dental photography to take accurate photos ever time. The entire dental team, even in multi-specialty practices, will benefit from it,” Loke told WorldDental Daily in Greater Noida.

Prior to its premiere here at FDI 2014, the camera has been showcased at large dental meetings in the US, China and Singapore. But now it is here, in India, that the EyeSpecial C-II was presented into shade taking and restorative simulating functions is anticipated for the camera in the future.

In addition to the camera, SHOFU also has a number of products for restorative dentistry on display, including the universal direct aesthetic restorative Beautiful Injectable and BeautifulSeatant, a product for sealing deep grooves and fissures without the need for a conventional phosphoric acid etchant.

There’s only one thing closer to reality than frasaco’s phantom heads, jaw and teeth models and strip crowns, and that’s—the real thing itself. That’s what has made the world’s frasaco premier choice for universities and dental students. After studying with models, students will have to treat real patients, which is why the simulation must be as realistic as possible. The success of the renowned frasaco brand is based upon this fundamental approach.

ATTRACTION STUDENT OFFER AT FDI!
Book any frasaco typhodont model and get 5 individual frasaco model teeth absolutely free!
OR get a 10% Discount on a minimum purchase of 50 individual frasaco model teeth.

Porter’s trailblazing innovations in measuring and controlling gases in critical applications reach their highest realisation and effectiveness in the Porter Nitrous Oxide Sedation Systems. This unparalleled 30-year legacy of precision is your assurance of a sedation system offering the highest attainable levels of patient comfort and system safety, reliability and ease of operation. The entire Porter system is designed to enhance the patient experience while helping generate a desirable and dependable revenue stream for you.

ATTRACTION FDI DISCOUNT OFFER!
Be one of the FIRST FIVE to book a Matrix Porter Digital or Analog Conscious Sedation System* at our booth during the FDI Congress and earn a Special Discount of INR 20,000.
And that’s not all, if you are one of the FIRST TWO to book a unit, you will also be entitled to a FREE Dental Training Course.

Revenue Growth is a major component of being a successful organisation. The Wand STA “All Anaesthesia System” is unique to dentistry in its proven ability to build practice revenue and increase profit. This is achieved in many ways including:
- Increased practice productivity
- Increases patient visits per day
- Patients return to finish their treatments
- Reduces time spent calming anxious patients
- Achieves profound anaesthesia within 2 min. versus 8-12 min. with mandibular block injections
- Reduces injections per patient
- Allows for bilateral procedures in a single appointment
- Reduces patient cancellations
- Increased patient referrals
In addition to productivity and referral increases, the benefit the WAND System provides patients creates an opportunity for additional revenue for the practice.

SPECIAL FDI STARTER PACKAGE WITH IMMEDIATE RETURNS!
Book a WAND STA unit at our booth during the FDI Congress to get a special FDI Offer Price* AND win FREE Hand-pieces worth INR 10,000.
