

**IDL DENTAL
TECHNOLOGIES LTD**

ABOUT THE COMPANY

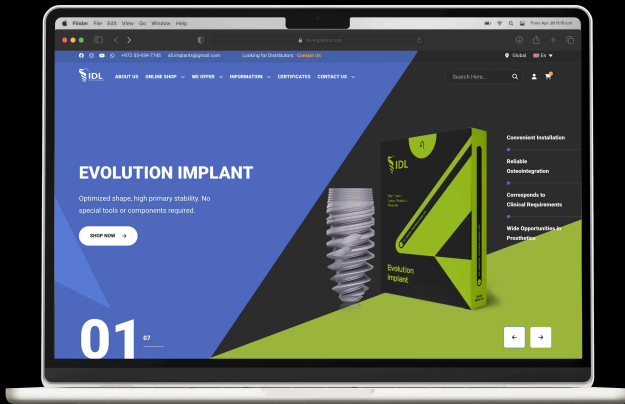

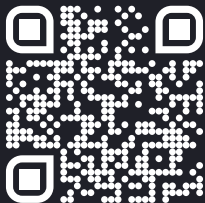

For more than 17 years, we have been developing, manufacturing, and supplying dental implants, as well as surgical instruments and orthopedic components. During development, we pay close attention to both users' demands and dental surgeons' needs. Combining high-quality materials with affordability, our products help doctors from different countries to grow and improve their patients' quality of life. This special approach allows us to create one-of-a-kind solutions, like the IDL dental implant system. One platform equals all diameters and options, and this principle allows surgeons to find an exact solution for specific clinical conditions, patient's anatomy, or their aesthetic preference.

OUR MISSION

We strive to deliver affordable solutions, combining fair prices and high-quality products. With patients' needs and surgeons' requirements set as our top priorities, we help specialists from many countries grow with us. This way, they can improve the quality of life for their patients as well.

SEMINARS & COURSES

Another key area of our activities is educational programs, enabling hundreds of practicing dentists to advance their skills through training led by IDL ambassadors and invited distinguished dental experts.

PARTICIPATION IN INTERNATIONAL EXHIBITIONS

We are actively involved in the orthodontic and dental sectors, regularly participating in major international industry exhibitions and organizing our own congresses to bring together leading experts.

BENEFITS OF IDL DENTAL IMPLANTS

- Ease of placement during surgery;
- Successful osseointegration ensured by a high level of purification from mechanical particles and advanced sterilization;
- Extensive prosthetic restoration options;
- Predictable success with immediate functional loading.

PROGRESSIVE IMPLANT

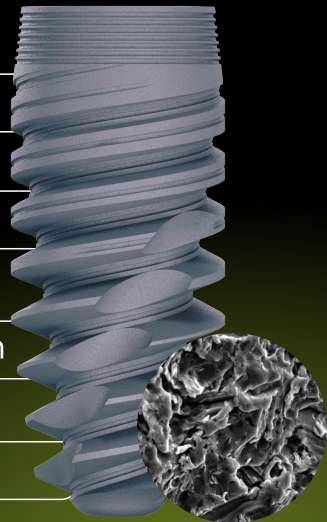

Progressive Implant is a pinnacle of dental innovation merging a decade's worth of industry advancements and clinical expertise. Engineered for precision and performance, this revolutionary implant promises unparalleled results while prioritizing patient comfort and well-being.

Clever geometry

Optimized implant body

Progressive thread design

Ultra-pure RBM

CORE IMPLANT

The placement of a pterygoid implant is an alternative approach that allows clinicians to avoid sinus lift procedures or other augmentation techniques when working in the distal regions of the maxilla. Pterygoid implants are most commonly used in cases of partial edentulism to avoid cantilever prosthetic constructions. Implant placement in the pterygoid bone requires significant surgical experience.

High cutting ability

Antibacterial coating made of anodized gold

Sharp apical tip for bicortical fixation

Ultra-pure RBM

ZYGOMA IMPLANT

IDL Zygomatic implants are a perfect surgical solution for immediate loading protocols. They are designed to provide a solution for cases of the atrophic bone maxilla.

High-stability restorations

Smooth body to reduce periopathogens adherence.

Intended for immediate loading protocol

Ultra-pure RBM
